LiquidPlanner®

Flexible Planning for Every Sprint

LiquidPlanner for Software Development Teams

Flexible Planning for Every Sprint

Agile has quickly evolved to become the preferred way to deliver quality code. Being Agile often means getting out of the way and letting your developers focus on what they do best: writing code. Featuring all of the advanced capabilities you'd expect in an enterprise solution, yet flexible enough to accommodate a variety of methodologies, LiquidPlanner has become the tool of choice for hundreds of teams around the world. Here's why:

3 Primary Benefits

Realistic Schedules For All.
Unlike every other project management tool on the market, only LiquidPlanner allows you to estimate your tasks using best and worst case estimates. An advanced scheduling engine incorporates all of these estimates in a given sprint and then automatically calculates the most likely date the project will be completed.

Drag-and-Drop Prioritization.
Even over the course of a short sprint, priorities change. Whether it's a critical bug that needs to be quashed or a new feature that needs to be built, only LiquidPlanner allows you to reprioritize your sprint simply by dragging and dropping the tasks in your schedule. Schedules are instantly updated and expectations are expertly managed.

Smarter Stand-Ups.
Many Agile teams use LiquidPlanner as a dynamic agenda for their daily stand-ups. Team members provide their updates, note obstructions, and the scrum master makes updates to the plan in real time so everyone on your team can get back to what they want to be doing: delivering quality code.

> " **LiquidPlanner is an invaluable tool for managing limited resources against the changing requirements of our many development projects. I now have much more insight into the reality of the entire project process, allowing me to address trouble spots and move to the next element of the project more quickly.** "
>
> — JOHN HAPRIAN
> VICE PRESIDENT OF

> AND OPERATIONS
> Monarch Teaching
> Technologies

> "LiquidPlanner stood out against other platforms because it can quickly show when a task or project is at risk. It puts all project work into a single view – so you can look at people's availability and time committed to every project and see where the risk is. "

— MATT NISONGER
 DIRECTOR OF IT
 SharedVue

Conquer the Uncertainty in Every Sprint

Integrated Bug Tracking.
Tracking and fixing bugs takes time and resources. However, if you're using a separate bug tracking tool, the time your team spends on fixing bugs is often not accounted for in your sprint planning. Many Agile customers use the LiquidPlanner API to integrate with GitHub, Jira, and Bugzilla for filing, tracking, collaborating on, and verifying bugs and incidents. The LiquidPlanner API enables you to seamlessly connect LiquidPlanner to third-party applications while Webhooks can be configured to receive push notifications triggered by events in LiquidPlanner.

Task Level Collaboration.
It's rare to find a team that is all sitting together in the same room. Whether you're working with developers across the globe or team members working from home, you need a tool that embeds rich collaboration capabilities at the level of each task. LiquidPlanner enables you to share everything that relates to a sprint -- from white board sessions, screen grabs and release notes so every member of your team can stay focused and on the same page.

Visualize Team Effectiveness.
The LiquidPlanner application includes a number of informative reports such as Burndown Charts, Baseline View and Workload Reports so you can quickly gauge if your sprint is on track and identify potential blocking points that might cause you to miss your delivery date.

Flexible For All Methodologies.
Whether your team uses Agile, Waterfall, or an Adhoc methodology (or some combination of the three), LiquidPlanner is flexible enough to support any or all of these methodologies in a single workspace.
